

Personal Operations Hub

A second brain for running multiple businesses solo — without dropping anything.

The problem

Running multiple businesses under one banner means juggling dozens of contacts, projects, follow-ups, and commitments — across ventures that don't share a system. Today this lives in scattered pieces: Notion, phone notes, head-storage, half-remembered intentions.

Lost context

Which contact was tied to which project, again?

Missed follow-ups

"I'll get back to you next week" — and forgot.

No workload view

Which business is starving this week?

Capture leaks

Ideas in shower, in car, in line — gone.

The solution

Extend the existing Mindmap app into a full operations hub. Tasks layer on top of the relationship graph. Workload visible across all businesses in one screen. Voice-capture from anywhere. Daily email at 7am.

The killer feature: workload through a relationship lens. The mindmap shows your network. Tasks reveal which parts of that network are getting attention — and which are rotting. No other tool does this.

What it looks like — Forecast view

The daily-driver page. Open laptop → see today across all businesses.

+1 more

Biz 3

· 0 today — starving

No tasks scheduled

Mindmap with attention overlay

Red rings = nodes you've been ghosting. Your network through an attention lens.

Build timeline

6 phases. ~4–5 weeks full-time.

Week 1

Foundation — schema & API

Businesses table, junctions, tasks table (with subtasks + recurrence). REST endpoints. Backfill existing owned companies into businesses.

Week 2

Forecast & side panel

/forecast page with five date columns. Business filter chips. Mindmap nodes show their tasks in a side panel on click.

Week 3

Capture & reminders

Cmd+K global quick-add. iOS Shortcut for voice capture. Right-click on graph nodes → add task. 7am daily email digest.

Week 4

Swim lanes & overlay

Toggle forecast view to per-business swim lanes. Overdue overlay on mindmap (red rings). PWA — install on phone.

Week 5

Subtasks

Nested tasks. Drag to reparent. Recursive completion. Checklist view on each task.

Week 6

Recurring tasks

"Every Monday", "first of the month", "every 2 weeks". Generator spawns next instance on completion.

What changes for you

DAILY

One screen shows today's load across all businesses.

Voice capture: "Hey Siri, add task..." — done.

7am email tells you the day before coffee.

Cmd+K captures from anywhere in 2 seconds.

Click a contact → see their tasks instantly.

WEEKLY

Sunday review: see which business is starving.

Mindmap reveals contacts you've been ghosting.

Recurring tasks fire on their own — invoices, reviews, check-ins.

Inbox triage as morning ritual. Empty by 9am.

STRATEGIC

One source of truth replaces Notion + phone + head.

Same network serves all 3 businesses without fragmenting.

Workload data drives decisions on which business to feed.

Reputation: stops dropping balls across ventures.

What this is — and isn't

● In scope

Tasks with due + defer dates

Forecast view + business swim lanes

Subtasks (nested) + recurring tasks

Mindmap integration (side panel, overlay, quick-add)

Voice capture via iOS Shortcut

Daily email digest at 7am

Installable PWA — works on phone

● Out of scope (v1)

CRM lead pipeline / deal stages

Tags (cut for simplicity)

Team collaboration / multi-user

Email integration (auto-task-from-email)

Native iOS / Android app

Accounting, billing, contracts

Marketing or lead-gen automation

Build approach

Extends the existing Mindmap codebase (Next.js + Supabase + React Flow). No platform migration. Same hosting, same auth, same database. New features layer on top of an already-working graph.

Next.js 16

Supabase

Drizzle ORM

React Flow

Tailwind v4

Vercel

PWA
